

Q SYSTEM DRAWING FILE STANDARD

Drawing Files are named with 3 characters followed by the .dr extension.

Character 1 – Drawing Set sheet category.

Character 2,3 – Drawing Set sheet number.

The drawing file name is tied to the Drawing Set sheet (page) number. If the data in the drawing file relates to sheet A1 in the drawing set, the drawing file name is a01.dr.

Note that a leading 0 is used for sheet numbers less than 10 to maintain the 3 character standard.

For Drawing sets using a point system, the 2nd character in the drawing name represents the group, and the 3rd character represents the sheet number. Example: for sheet A1.1 the drawing file name would be a11.dr.

For point system group numbers or sheet numbers needing 2 characters (above 9) but where only 1 is available, hexadecimal notation is used. Example for sheet A5.11, the drawing file would be a5b.dr. For sheet A10.4, the drawing file would be aa4.dr.
